Each wood has its own color

As each wood is unique, the application of varnish or stain can highlight these characteristics. Therefore, Renner recommends applying the chosen product to a small area of the wood to confirm if it is the finish you want! The colors in this catalog are just references to a specific type of wood. The type of wood, its porosity and the number of coats applied influence the final finish.

YO 1371 00 - Satin

If It's Wood,

**RENNER
SOLVES!**

By protecting only the surface, fungus and moisture from the lower part can cause damage to the wood over time, making maintenance difficult and more expensive.

Mainly in DECKS, which are generally installed in humid areas with a high incidence of sun and rain, such as lawns, gardens and swimming pools.
